

Turning Up The Gas: 20 Years of Innovation in the Fast Lane

A-GAS, an international refrigerant supplier that helps its customers to address issues from replacing refrigerants to recycling and reclaiming material, is celebrating 20 years and is excited to partner with the Marussia F1 Team as both parties share the same ambition to consistently build their performance on the global stage.

“Like A-Gas the Marussia F1 Team is dynamic and strives for excellence. Sponsoring the team reflects our drive and ambition to excel on an international platform,” explains Sally Fairman, Group Corporate Development Director, A-Gas International.

A-Gas has always enjoyed a high profile but is now embarking on the next stage of its growth and has agreed an enhanced relationship with the Marussia F1 Team (www.marussiaf1team.com) which will see the company benefitting from an increased presence on the MR02 race cars and trackside environment at selected Grands Prix on the calendar.

“Our partnership with the Marussia F1 Team shows our commitment to innovate and drive the business forward. As a solutions provider, we offer unrivalled technical support and advice in an ever-changing, regulatory-focused industry. We are very excited to have further developed our relationship with the Marussia F1 Team, since the exposure this gives us enables A-Gas to build its presence internationally,” says Sally Fairman.

“It is always very rewarding to renew existing relationships with our Team Partners, with whom our partnerships are

yielding real business benefit. By working with A-Gas to tailor their requirements according to their key territories, we are also able to demonstrate a bespoke approach which reflects the individual nature of our Partners and their business needs,” adds Andy Webb, CEO, Marussia F1 Team.

Over the last 20 years the company has embarked on a steady path of organic growth and latterly by acquisition with the purchase of Coolgas and RemTec during the last 18 months.

A-Gas has built a very successful business and is a market leader in the UK, Australia and South Africa and is increasing its presence in Asia and the Americas.

A-Gas is an expert in supply chain management and offers a complete lifecycle from bulk deliveries, to blending, filling, customer delivery and reclamation and recycling under its environmental services.

“It is not just about selling refrigerants but providing a service and developing solutions for our customers, backed up with good technical support and advice,” says Sally Fairman.

A-Gas also takes its environmental obligations seriously and pioneered its own separation technology which enables the re-processing of formerly unusable refrigerant mixtures instead of sending them for incineration.
