

IT IS ILLEGAL TO RELEASE REFRIGERANT INTO THE ATMOSPHERE

Environmental Services:

A-GAS® and **METRACLARK** offer

Refrigeration & Air-Conditioning Wholesale

Complete Refrigerant Lifecycle Stewardship

A-GAS provides customers with the necessary means to be able to meet the requirements of SANS 10147:2009 standards pertaining to refrigerant reclamation and recycling. As stated in the National Environmental Management: Air Quality Act (39/2004): Regulations regarding the phasing-out and management of ozone-depleting substances 37621, it is **ILLEGAL** to release refrigerant into the atmosphere. Our services include the supply of recovery and pump down cylinders/drums, purity testing of refrigerant as well as a waste management program.

Packaging

A-GAS provides a fleet of dedicated recovery and pump down cylinders with specialised valve technology.

This allows engineers to retrieve waste refrigerant in a safe and environmentally responsible manner.

We have 8kg and 45kg cylinders as well as 850kg drums. The cylinders are available on a rental basis.

METRACLARK provides dedicated recovery and pump down cylinders to customers as requested.

Paperwork

METRACLARK will provide their customers with an Environmental Services Request Form which is to be completed by the customer.

One copy is kept by the customer and another copy is returned to **METRACLARK** with the pump down or recovery cylinder.

Customers

Customers must ensure that the cylinder number is clearly stated on their ES Request Form. This is in order to ensure full traceability of the cylinder.

The form and the cylinder must be returned to **METRACLARK** at the same time.

Returns

METRACLARK returns customer recovery and pump down cylinders to **A-GAS** together with the relevant completed ES Request Forms:

METRACLARK

Refrigerant Buyback Program

Contact **A-GAS** for further details. Terms and conditions apply.

Certification

A-GAS will issue a certificate to the customer which ensures traceability of the returned refrigerant.

Laboratory

Returned cylinders are sent to the laboratory at **A-GAS**. The **A-GAS** laboratory is fully equipped to check refrigerants for moisture, residues, non-condensables and acidity to ensure refrigerant, after cleaning, complies with AHRI 700 standards and therefore can be classified under SANS 10147:2009 as 'reclaimed'.
