

TRACE-A-GAS®

# A-GAS®

## TRACE-A-GAS®

### Leak detection made easy

With the F-Gas regulations placing an ongoing emphasis on leak reduction, A-Gas has introduced a next generation leak detection product known as *Trace-A-Gas*®.

### What is *Trace-A-Gas*®?

A 5% Hydrogen and 95% Nitrogen mixture which is **non-flammable, non-toxic and safe for the environment**...the perfect solution for locating even the smallest of leaks.

### Features and Benefits:

- Hydrogen is the smallest molecule, enabling it to move rapidly through the system and quickly locate leaks
- *Trace-A-Gas*® can detect much smaller leaks than other methods; it is up to 100 times more sensitive than leak detection spray and can detect leaks of less than 5 grams a year
- Test all areas of the system, including insulated or difficult-to-access pipework where leak detection spray cannot easily be used
- Real time results: spend less time on site
- Reduce costs by avoiding re-work
- The product is compatible with a standard nitrogen regulator
- The full range of accessories are available from your local wholesaler, including a suitable electronic leak detector
- *Trace-A-Gas*® is available from A-Gas in the popular, portable 10 litre cylinder size. 30 litre cylinder sizes are also available for workshop applications
